Hello Jaycen and Teri,

We are currently working on the addendum letter requested for Pierce High School which will include updated Shallow Foundation Design Parameters and new Drilled Shaft recommendations both taking into account FEMA flood conditions. Could you please help provide me with the anticipated maximum loads for the canopy structures as well as a map indicating the proposed location(s) of the canopy.

Thank you,

Staysha Delgado

Good Morning Jaycen and Teri,

Just following up on my previous email. I know we stated we would have this letter ready around middle of this week for you but we are currently waiting for the additional info regarding the planned canopies before we proceed with finalizing. Once this info is received we can work on finalizing and having it sent over to your team but in the meantime we are on hold.

Thank you and looking forward to hearing back from you soon.

Thu, May 11, 2023 at 12:07 PM

The canopy columns/pier footings are designed for the following loads:

- Vertical DL = 1705#
- Vertical LL = 3210#
- Lateral (seismic) V = 2130# at h = 10' (this includes Ω_0)

The canopy is located adjacent to the east side of the pool building.

Jaycen- please provide the requested map.
